

Project Closing Conference: Transfer of waste management concepts and technologies

Munich, IFAT, Conference Hall B –Room B52
15 May 2018, 9.00 am - 2.00 pm

Invitation Project Closing Conference Transfer of waste management concepts and technologies (Bulgaria, Iran, Croatia and Turkey)

On behalf of the German Environment Agency (UBA), adelphi would like to cordially invite you to the final Project Closing Conference of the project “Identification and transfer of waste management concepts, services and products“ focussing on Bulgaria, Iran, Croatia and Turkey. This event will take place at the exhibition centre in **Munich** on **15 May 2018** and is part of the world’s leading trade fair for water, sewage, waste and raw materials management.

About the Workshop: The half-day workshop programme includes presentations by the German Environment Agency (UBA), the German RETech Partnership, representatives from the four project countries as well as adelphi and INTECUS. The objective is to present the main project findings and to provide a platform for intensive exchange between international waste management actors.

Target Audience: Recycling and disposal companies, waste management technology and service providers with business interests in the respective countries, and national stakeholders in the project countries such as representatives of relevant ministries and municipalities, waste management associations and scientists.

About the Project: Emerging economies and young EU member states that have experienced economic growth and increasing consumption rates often encounter development lags in their waste management systems. Germany has pledged to support these countries in the development of advanced waste management systems. As part of these efforts, the German Environment Agency (UBA) has funded and implemented the project between March 2015 and December 2017 together with its project partners (adelphi research gGmbH, INTECUS GmbH, Environmental Policy Research Centre (FFU) at Freie Universität Berlin/ Germany).

Logistical Information:

- Participation in the event is free of charge (but requires a valid IFAT ticket)
- The number of seats is limited.
Please [register online](#).
- The workshop language is English.
